## Hartlepool Marina invest in a 10Kwp, 40 panel solar PV system

### Case Study

Hartlepool Marina decided to take advantage of the free electricity plus fantastic financial returns available from a Solar PV installation. A 10% financial return plus free electricity can be achieved every year for 25 years, additionally an organisation can 'go green' and dramatically reduce it's carbon footprint and whilst reducing the impact of escalating energy costs and providing a more sustainable future.

*"We are extremely happy with the work undertaken by ACIS. From the outset they were the most professional and detailed of the companies we instructed to tender, and I'm happy to say this has been backed up with the quality of their installation. A fine job that we are delighted with"*
